Apple v. OpenAI: Debrief

Use after discussion. These takeaways explain the reasoning; compare them with your original decision.

Financial Lead — Key Takeaways

- Identify what the spending protects. Distinguish the value of an asset from the cost of detecting, preventing or responding to its loss. Explain which objective your allocation serves.
- Apply the matrix before choosing an instrument. Consider detectability, the life of the advantage and the cost of disclosure for the information at issue.
- Make the tradeoff explicit. State what your proposal leaves less protected and what evidence would make you reallocate the next dollar.

Marketing Lead — Key Takeaways

- Communication changes the information available. Identify the audience, purpose and timing of your proposed message, and what it would reveal.
- Connect the message to the asset. Use the matrix to explain how disclosure affects the source of advantage and the ability to demonstrate misuse.
- Separate allegations from conclusions. Identify what the complaint claims, what supports the claim in the packet and what remains unresolved.

Operation Lead — Key Takeaways

- Protection crosses company boundaries. Map who holds the information, who can request it and who can authorize its use.
- Consider the cost of each control. Explain how your proposal affects collaboration, supplier capacity and the ability to trace a disputed transfer.
- Test the process in practice. Describe a scenario that would challenge the proposed arrangement and what evidence would show whether it worked.

Tech Lead — Key Takeaways

- Technical evidence serves a question. Specify what your system would need to establish about access, copying or transfer, and what it could not establish.
- Balance protection and productive work. Explain the effect of your proposal on legitimate engineering activity as well as on the risk being addressed.
- Connect detection to the matrix. Describe how the ability to observe and document an event affects the usefulness of the instrument your team chooses.

Account Manager — Key Takeaways

- Match the protection mechanism to the asset and distinguish allegations from established facts.
- Different rankings can be defensible. Connect the priorities to evidence and the weekly concept.
- Example allocation: 40/30/20/10 totals 100. Explain your own allocation; priority points are not course-grade points.

Key takeaway

- Return to the formula and the pill. Compare the assets through detectability, the life of the advantage and the cost of disclosure, then explain the tradeoff in your chosen protection plan.
- What are you protecting, and what does that protection require you to give up?

Apply to your venture

Choose one asset in your venture. Compare two ways to protect it, identify a disclosure risk, and state what evidence would support your recommendation.

Output: A protection-choice table for Midterm Section D.

Feedback check

Identify one evidence-backed strength in your explanation and one specific revision. Save the record and use the reflection guide.
