Tesla: Debrief

Use after discussion. These takeaways explain the reasoning; compare them with your original decision.

Financial Lead — Key Takeaways

- Allocate by a stated strategic hypothesis. Name the product line and gate your proposal concerns, and explain the evidence for that placement.
- Compare both returns and commitments. Consider current economics, development uncertainty and how much flexibility the investment leaves.
- Define a review point. Identify a market or technical signal that would change the allocation rather than assuming today's gate remains unchanged.

Marketing Lead — Key Takeaways

- Positioning depends on the competitive stage. Explain what the customer is choosing between and how your proposed message fits that choice.
- Separate demand from value capture. State how the plan could affect volume, willingness to pay, retention and margin.
- Test the promise. Identify evidence needed to support the proposed positioning and what would make you revise it.

Operation Lead — Key Takeaways

- Adoption and operation are different questions. Explain how your proposal affects who uses the network, who funds it and who earns from its use.
- Trace the role of complements. Identify the partners, infrastructure and services needed for the chosen network strategy to work.
- Evaluate the next stage. State which change in the market would justify moving the dial on access, investment or operating responsibility.

Tech Lead — Key Takeaways

- Engineering follows a gate-specific question. Identify what remains technically or commercially unresolved in the product line you prioritize.
- Compare concentration with optionality. Explain what the chosen scope enables and which alternatives it leaves less developed.
- Set evidence for the next commitment. Describe a milestone and a finding that would make the team redirect engineering effort.

Account Manager — Key Takeaways

- A widely adopted standard does not automatically establish where profits will come from.
- Different rankings can be defensible. Connect the priorities to evidence and the weekly concept.
- Example allocation: 40/30/20/10 totals 100. Explain your own allocation; priority points are not course-grade points.

Key takeaway

- Apply the Dominant-Design Clock to each product line. Explain what is still being decided, what adoption depends on and how the company expects to capture value as the market changes.
- What would tell you that the strategy fits yesterday's gate rather than today's?

Apply to your venture

Choose your venture's first customer segment. Identify one adoption barrier, one relevant standard or complement, and a low-cost way to test adoption.

Output: A market-entry decision and test for Final Section B.

Feedback check

Identify one evidence-backed strength in your explanation and one specific revision. Save the record and use the reflection guide.
