Cerebras: Debrief

Use after discussion. These takeaways explain the reasoning; compare them with your original decision.

Financial Lead — Key Takeaways

- Funding must support a route to adoption. Explain how the proposed spending strengthens the offering, makes switching easier or enables delivery.
- Compare financial measures carefully. Distinguish revenue, margin, operating results and available cash before assessing the resources behind the plan.
- Test the investment hypothesis. Identify what customer or cost evidence would justify further spending and what would make you change course.

Marketing Lead — Key Takeaways

- The buyer's problem defines the comparison. Specify the customer segment, the problem it values solving and the evidence that the offering addresses it.
- Map the cost of leaving. Consider procurement, skills, workflows, complements and perceived risk when judging the route to market.
- Assess the customer mix. Explain how the proposed channel changes both adoption and dependence on particular accounts.

Operation Lead — Key Takeaways

- Delivery is part of the switching decision. Explain what a buyer must believe about capacity, timing and support before relying on a new supplier.
- Map promises to dependencies. Identify what has been promised to customers, what inputs the plan depends on and who controls those inputs.
- Compare flexibility and assurance. State what the proposal commits, what it leaves adjustable and how you would respond if demand or supply changes.

Tech Lead — Key Takeaways

- Benchmark the dimension that matters. Explain which workload and user need the performance measure represents, and what the benchmark leaves out.
- Compare both sides of the threshold. Assess the expected benefit of the proposed engineering work against the customer effort it creates or removes.
- Make the adoption hypothesis testable. Identify a trial that would reveal whether the remaining obstacle is performance, integration, cost or something else.

Account Manager — Key Takeaways

- A technical advantage matters when customers can realize it after switching costs.
- Different rankings can be defensible. Connect the priorities to evidence and the weekly concept.
- Example allocation: 40/30/20/10 totals 100. Explain your own allocation; priority points are not course-grade points.

Key takeaway

- Return to the keyboard example. Compare a benefit on the dimension a buyer values with the full cost of switching, then explain which part of that comparison your team's plan changes.
- What would make a particular customer choose to switch?

Apply to your venture

Compare your venture with two alternatives, including the current way customers solve the problem. List evidence, switching costs, and one test of your claimed advantage.

Output: A competitor comparison table for Final Section C.

Feedback check

Identify one evidence-backed strength in your explanation and one specific revision. Save the record and use the reflection guide.
