# Marvell: Debrief

Use after discussion. These takeaways explain the reasoning; compare them with your original decision.

## Financial Lead — Key Takeaways

- Cash allocation changes future flexibility. Explain which obligations the proposal meets and which choices remain available afterward.
- Compare sources with uses over time. Distinguish recurring operations, one-time proceeds and payments falling due when assessing the plan.
- Test a demand shortfall. State what happens to available cash and required payments if the expected revenue arrives late or does not arrive.

## Marketing Lead — Key Takeaways

- Commercial choices shape the demand side of the budget. Explain how the proposal changes the timing, certainty and concentration of customer orders.
- Compare the two cancellation clocks. Assess how quickly demand can change relative to the spending needed to supply it.
- Test the evidence behind the forecast. Identify what would distinguish durable demand from temporary ordering behavior and how the budget would respond.

## Operation Lead — Key Takeaways

- Commitments have dates as well as totals. Show when payments fall due and which demand assumptions support them.
- Exiting has more than one cost. Consider fees, lost access, delays and rebuilding effort when assessing how reversible the proposal is.
- Compare scenarios before committing. Explain how the proposed arrangement performs under higher, lower or later demand.

## Tech Lead — Key Takeaways

- Stopping and restarting are separate questions. Identify what it would take to pause the program and what capability or time might be lost.
- Budget around evidence. Explain the milestones and customer assumptions supporting the proposed spending, including what would trigger review.
- Distinguish dollars from ratios. State what a change in spending as a share of revenue reveals and what it leaves unknown about the program.

## Account Manager — Key Takeaways

- Budget against the speed at which costs can change, not only expected revenue.
- Different rankings can be defensible. Connect the priorities to evidence and the weekly concept.
- Example allocation: 40/30/20/10 totals 100. Explain your own allocation; priority points are not course-grade points.

## Key takeaway

- Return to the airline that revised its demand forecast while its aircraft orders remained. Use the Reversibility Budget to compare what the company expects with what it has promised and how quickly either can change.
- If demand disappoints, how long would it take to stop paying — and at what cost?

## Apply to your venture

Classify five venture expenses as committed, sticky, or flexible. State their stopping costs and recalculate the budget with revenue 20% below your base case.

**Output:** A spending table and downside scenario for Final Section E.

## Feedback check

Identify one evidence-backed strength in your explanation and one specific revision. Save the record and use the reflection guide.
