Simulation Reflection and Feedback Guide

Start here

- **Who:** each student submits an individual reflection.
- **Submit:** one 300–500 word reflection, using the five headings below; a .docx or .pdf is accepted. References do not count toward the target.
- **Where:** the existing weekly reflection assignment in HuskyCT/Blackboard.
- **When:** keep the existing deadline shown in that assignment. The course schedule identifies the reflection day; this update does not change its cutoff time.
- **Use:** your saved decision record, the static case packet, and the debrief. You do not need to rejoin a SkillSimm team to write.
- **Length transition:** the shorter target applies from the October 20 module onward. Work already submitted under the 500–800 word guidance is not penalized for following it. A complete 500–800 word response remains acceptable.
- **Finished when:** all five headings contain a specific answer, evidence is traceable, and the upload opens correctly.

Save this decision record before leaving class

My decision: …
Evidence and source location: …
Trade-off: …
What changed after discussion: …
Course concept and application to our venture: …

Record the decision in words, not only an option letter: option order can differ between the simulation and slides. Save a copy or screenshot in your own notes. If SkillSimm is unavailable, complete the same record using the static packet and bring it into the discussion.

Five response headings

1. **Decision:** What did you choose, and what problem were you trying to solve?
2. **Evidence:** What figure or specific passage informed the choice? Identify its location and explain what it means.
3. **Trade-off:** What did your choice give up? Compare it with one plausible alternative.
4. **Revision:** What would you change after discussion, or what evidence would change your mind? Explain why.
5. **Connection:** Apply one weekly concept to the decision and explain one implication for your team's venture.

Reflection rubric — 100 points

Criterion	Points	What a complete answer does
Decision	20	Identifies a concrete choice and the problem it addresses.
Evidence	20	Uses traceable case evidence and interprets it accurately.
Trade-off	20	Explains an alternative and what is gained or lost.
Revision	20	Explains a change in reasoning or a condition that would change the choice.
Connection	20	Applies a course concept and makes a specific venture connection.

For each criterion: 17–20 = specific and well supported; 13–16 = sound but incompletely explained; 1–12 = partial, generic, or unsupported; 0 = absent. This clarified rubric applies to future reflections, not as a new requirement for work already submitted. Simulation speed, token use, and leaderboard position are not substitutes for the quality of your reasoning.

Feedback you can act on

Each reflection receives a criterion-level score, **one specific strength**, and **one next revision**. Where needed, feedback names a factual correction separately.

Illustrative feedback: "Evidence: you compared the two revenue lines using their different margins. Next revision—Trade-off: explain what slower direct-sales growth gives up, and what evidence would justify that sacrifice."

For project feedback, use the same pattern: **section and criterion → evidence in your work → next revision**. In the final, record each midterm comment, the change made, and where to find it (or explain a reasoned decision not to change).
